

ABSTRACT OF THE DISCLOSURE

There is provided an output device for outputting an image using image data generated by an image generating device, and image generation record information that is associated with the image data and that includes at least information relating to shooting conditions at the time of generation of the image data, comprising an image quality adjuster that, in the event that the image generation record information contains light source information relating to color shift of a light source at the time of generation of the image data, is able to execute the white balance adjustment process of the image data on the basis of the color of the light source obtained using the light source information; and an image output unit for outputting an image according to the image quality-adjusted image data.
